

## Grey Tank Start Up & Maintenance

### **Congratulations on your new vessel / grey tank!**

Grey tanks are known to smell more than sewage tanks due to the inorganic content. **ProPower** is happy to assist you in keeping your Grey Tank free of not only odours but also sludge, crystallisation and gummed up sensors! The beauty of ProPower is that it is 100% Natural, Non-Toxic and good for the environment! It utilises nature's cleaning microbes that have been working hard for millions of years and by putting them in your tank they will feast on all that is nasty keeping your tank clean.

### **First Time Use**

Shake bottle and pour the recommended dosage into a bucket of water and pour some down all drains that run into the Grey Tank. **Tip:** Do this at the end of the day after their consistent use so that our microbes can start cleaning your pipes.

### **Emptying Grey Tanks**

Once your tank is full, pump out the tank as you normally would but do not fill and re-pump out with fresh water. Thereby a small amount of treated grey water is still in the tank. This treated waste water has some of our microbes inside thereby allowing your continuing doses to be half of the first!

Please note that ProPower is excellent for all types of waste water systems being Town Sewage or a Septic/Bio System

### **Continuing Use**

Shake bottle and pour the **Regular Dosage** into a bucket of water and pour some down all drains that run into the Grey Tank. **Tip:** If you follow the previous tip, you will clean your piping every time you dose the system.

Tank Size	Dosing Quantity	Tank Size	Dosing Quantity
250 Litres	250ml ProPower	2000 Litres	1.5 Litre ProPower
500Litres	500ml ProPower	4000 Litres	2.5 Litre ProPower
1000 Litres	1 Litre ProPower	6000 Litres	3.5 Litre ProPower

Continued treatment for large tanks, dose after Pumping out. DO NOT FLUSH TANKS WITH WATER

Tank Size	Dosing Quantity	Tank Size	Dosing Quantity
250 Litres	125ml ProPower	2000 Litres	750ml ProPower
500Litres	250ml ProPower	4000 Litres	1.25 Litre ProPower
1000 Litres	500ml ProPower	6000 Litres	1.75 Litre ProPower
